Stand Alone Brush Holder Upgrades for GE Single Brush Holders

GE Part #	Size (Inches)	HPC# w/o Spring
36B465471	.750 x 1.5 x 2.97	10.751529.1.001
36B465472	.875 x 1.5 x 2.97	10.871529.1.001
36B465473	1.00 x 1.5 x 2.97	10.101529.1.001

Helwig Red Top Brushes

Upgrade from OEM hammer plate brushes to Helwig’s RED TOP brushes for improved performance.

With constant force springs, it is highly recommended the top of the brush be insulated to ensure no current flows through the spring preventing deterioration of spring pressure.

The RED TOP has an insulating benefit but also has the ability to absorb shock and vibration.

Therefore, electrical wear is minimized with more stable brush contact and a lower voltage drop. It allows for easier brush installation as split brushes are held together in a single unit form.

Helwig’s GE stock cast holder promotion created some interesting questions we thought we should answer.

1. Is this the exact replacement to the GE brush holder part number being listed? **YES**
2. Along with the Helwig springs will the holder fit an original GE spring or a competitor’s? **YES**
3. Can we get just one holder if that is all we need? **YES**
4. Do the Helwig-GE stock holders come with alignment clips? **YES**

*See above chart listing the GE and Helwig part numbers. Helwig part numbers listed come only with terminal screw and alignment clip. Spring clips are supplied separately.

WARNING: Just like with brush grades, do not mix different manufacturer’s spring clip in a single motor. Design differences will affect selective action or brush load share.

Call Dan or Tracy at 253-853-7456 or Helwig Customer Service at 1-800-962-4851.
