

Regen Application Questionnaire

1. Will all motions be used at the same time? If not, which motions will be used together?
2. Are any of the motions oversized for single failure redundancy purposes? If so, please detail each motion's service factor.
3. Is regen system redundancy required for single failure operation?
4. What is the crane's ambient operating temperature range?
5. Will the controls be located in a control cabinet or air conditioned control house?
6. List each motor's rated power factor.
